Atlanta 2™

**It's not a chair.
It's peace of mind.**

For patients at risk of falls, and those with vigorous, involuntary movements, the Atlanta 2™ has been clinically designed to provide a robust, durable and safe environment, reducing the risk of injuries and falls.

Those living with dementia often spend long periods of time in poor seating. Seating that makes them feel disorientated, agitated, and distressed.

The Atlanta 2™ therapeutic chair has been clinically designed for patients with dementia, preventing slips and falls. Its cocoon-like design provides sensory feedback across the body, making them feel safe, secure and supported.

The Atlanta 2™ is available in a range of colours and fabrics, to suit both hospital and homecare settings.

How can the Atlanta 2™ help someone living with dementia?

- 1 Feels Like a Hug**

Dementia-accredited design helps reduce agitation, promoting relaxation due to its supportive, cocoon-like feeling.

- 2 Helps Mitigate Falls Risk**

Unique tilt and recline feature means the chair user has a lower centre of gravity.

- 3 Provides Enhanced Comfort**

Removable leg rest configuration provides comfort for those with involuntary movement.

- 4 Helps Reduce Pressure Risk**

New calf-pad and footrest configuration helps those with tight hamstrings to find a comfortable sitting position.

- 5 Easier and Safer Transfers**

Hoist and stand-aid compatibility allows caregivers to assist with transfer in and out of the chair.

- 6 Pressure Care Surfaces**

Pressure-redistributing features and proven Dartex® materials on surfaces help reduce pressure injury risk.

Giving caregivers the means to care.
